## AI Product Engineer

oluwadamilaredavid586@gmail.com

---

### SUMMARY

AI Product Engineer who ships complex, production-grade systems fast. Comfortable across the full stack and the edge - from React front ends to custom backends, real-time media, and AI automation pipelines.

### EXPERIENCE

#### AI Product Engineer - Independent

Self-directed product work

- Design and build complex web apps, systems, and websites end to end, delivering in 1-4 week iteration cycles.
- Built a custom backend-and-database platform (BaaS) from scratch to power my products - auth, storage, and edge APIs on Cloudflare Workers and R2.
- Building a real-time meeting product (video/voice) on a selective-forwarding architecture rather than peer mesh, for scale.
- Design AI automation pipelines that replace repetitive manual workflows so teams can reallocate attention and time.

### SKILLS

TypeScript - React - Cloudflare - AI Automation - Realtime
